

Physocarpus Opulifolius

(*Physocarpus opulifolius*)

Propagation

Not Applicable.

Growing On to Finish

Media

Use a well-drained, disease-free, soilless media with a pH of 5.5 to 6.2 and standard nursery fertilizer.

Light

Grow in full sun conditions for best production growth rate and foliage color.

Fertilizer

Use typical fertilizer as with your regular nursery crops.

Pruning

A light pruning can be effective in the late Winter to tone up product for Spring sales.

Spacing

Grow container tight when initially potted. Space as needed to help develop well-branched plant.

Container Size

#1 gallon (18 cm) pot: 1 plant per container

#3 or #5 pot: 3 plants per container

Crop Scheduling

Transplant to #1 nursery container finish: 3 to 6 months depending on climate

NOTE: Growers should use the information presented here as a starting point. Crop times will vary depending on the climate, location, time of year and greenhouse environmental conditions. Chemical and PGR recommendations are only guidelines. It is the responsibility of the applicator to read and follow all the current label directions for the specific chemical being used in accordance with all regulations.
