

Best Practices & PGR Recommendations

Baill FloraPlant®

Solera Interspecific Geraniums

- Dark leaf, medium-sized mounded plants keep their blooms all season.
- Excellent garden performance in an easy-to-control, medium greenhouse habit.
- Interspecific breeding means great heat tolerance and longevity in the landscape and containers.
- Availability from our new state-of-the-art YecaFlora farm with trucking during peak to the U.S. border.

Crop Culture

Spring 2024 West Chicago Grow Out:

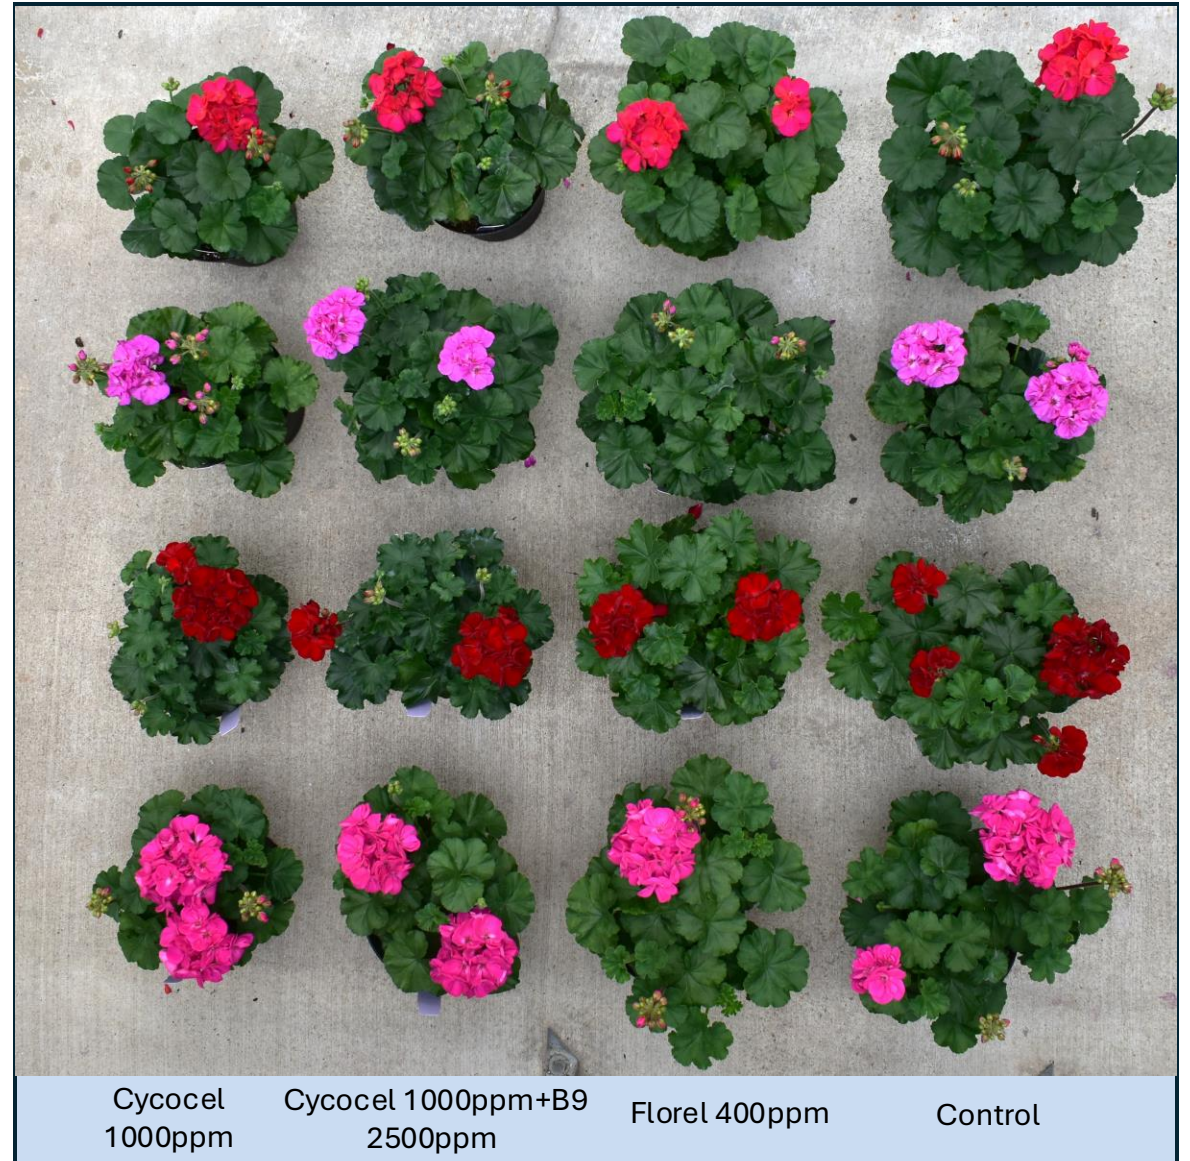

- Trialed 3 different PGR applications:
 - Cycocel 1000ppm
 - Cycocel 1000ppm/B9 2500ppm
 - Florel 400ppm
- End goal to determine best finishing recommendation

Crop Culture

Spring 2024 West Chicago Grow Out:

- All colors were stuck week 50, transplanted week 2.
- Grown in a greenhouse environment with an ADT of 74.5F in a 6 inch pot.
- Solera is recommended for 4 to 8 inch pot sizes.
- **A B9/Cycocel tank mix provided the most well branched, toned finished plants**

Key Takeaways

Best PGR practices:

- As with all Geraniums, early Florel sprays are necessary to create well-branched plants
- B9/Cycocel tank mix works best to control the habit and may be necessary to apply more than once when grown in warmer conditions.

Solera Geraniums can be grown alongside and treated the same as other Zonal or Interspecific Geraniums
