

Lisianthus grandiflora Julietta

This naturally compact, F1 hybrid Lisianthus flowers at least one week earlier than other pot Lisianthus which means more turns on the bench and a longer selling window

Julietta is naturally dwarf and does not need any PGRs. Twice as compact as the existing series, Rosie.

Perfect as a pot crop, mixed container component, and specialty retail

Germination Information

Plug Size: 288 or larger

Cover Seed: No

Germination Temp: 59-68° F (15-20° C)

Days to germinate: 20-25; light required for germination

Plug Crop weeks: 8-10

Finishing Information

Soil pH : 6.5-7.2

Temperature Day: 68-75° F (20-24° C)

Temperature Night: 55-60° F (13-16° C)

Transplant: Transplant into final container when at least 2-3 pair of true leaves are open; transplant when conditions will not stress the roots (early morning when it's cooler and less sun) stress will result in poor growth and may also cause rosetting; do not allow plugs to become rootbound

Plant Growth Regulators: PGR not required but using a PGR may help with leaf color and strong flower stems. 10 days before shipment, spray one application of 300-350ppm of B-nine to the top.

Crop Times

4"/4.5"/Quart: 13-15 weeks, 1PPP

5"/6"/1 Gallon: 13-15 weeks, 1PPP

Left: Rosie White

Right: Julietta White
