CULTURE INFORMATION

The new classification of the Morel series by flower and pot sizes is accompanied by a new technical information: the average daily temperature (ADT). These are the thermal conditions under which varieties give the best results at the flowering stage. It provides a measurable factor to the determination of the "Ideal sales period according to climate".

		Ideal sales period for climate type								  Advised ADT* at flowering stage* in greenhouse	Plants yard ²	Culture time in weeks from sowing		
		Pot size Ø in in.	South				North

These growing periods are observed in Fréjus (France) with the growing techniques described on our web site www.cyclamen.com. Please contact us for the adjustments to make according to your localization.

In this respect, Smartiz® for example will be advised to be produced in 2,5" pots if the flowering period corresponds to a cooler period, winter or spring in all regions, and also in autumn in Northern climate type. On the other hand, if produced in 4" pots, it is advised that the flowering period coincides with a warmer period, summer for all regions and also autumn in Southern climate type (temperatures of 68° ~ ≥ 77°F).

54 ~ 59°F

Cold culture conditions to obtain plants with small volume or to reduce the transpiration of the plants with large volume. Mind the humidity. These temperatures request varieties with low sensitivity to Botrytis.

54 ~ 68°F

Cold to cool culture conditions, ideal for most of the large flower types (Halios®) in a standard pot of 5.5 to 6.5" (14 - 17cm)

59 ~ 68°F

Cool culture conditions, ideal for most of the mini and intermediate varieties in standard pot of 3.5 to 5" (9 to 12 cm).

68 ~ ≥ 77°F

Warm culture conditions to obtain plants with a larger volume than normal, with high performance during culture and at the consumer's.
