- 6” Pots - 216 pots per pallet
- Minimum order - 1/2 pallet
- Available weeks: 50 - 26

Exclusively available from Ball Seed shipping from Aldershot Greenhouses located in Burlington, Ontario.

Seeking other HBA hydrangea varieties? Look to Webtrack for the full listing from Aldershot Greenhouses to compliment these exciting Ball Ingenuity exclusive varieties.
Tips for Hydrangea Growing Success

Forcing Tips

- Average crop time is approximately 11 weeks.
- Different factors can contribute to the bloom time. Temperature can be used to increase and decrease the rate of growth.
- Spacing should occur 2 weeks after forcing begins, important to space on time.
- Average day and night temperatures of 66 degrees F (19 degrees C) is ideal.
- As days lengthen and sunlight quality improves, bloom time will become faster.
- Be sure to apply aluminum sulfate to blue varieties at a minimum of five applications.
- B-9 is the most commonly used PGR, best applied earlier in the crop time to avoid decreasing bloom size.
- Do not allow hydrangeas to wilt especially in the later stages of flower development. This can result in irreversible damage to the flowers and leaf margins.

Flower Development Stages

- 8 Weeks to sale buds are dime size
- 6 Weeks to sale buds are nickel size
- 4 Weeks to sale buds are quarter size
- 2 Weeks to sale sepals begin to show color
